

MANAGEMENT REVIEW MEETING — MINUTES

Quality Management System (QMS)

ISO 9001:2015 — Clause 9.3

Organization	
Scope of QMS	
Meeting Reference / No.	
Date & Time	
Location / Mode	
Chairperson (Top Mgmt)	
Quality Manager / MR	
Secretary / Minute Taker	
Review Period Covered	
Next Review Date	

1. Purpose & Scope of Review

Criterion	Confirm the meeting's intent: to review the suitability, adequacy, and effectiveness of the QMS and its alignment with the strategic direction of the organization (ISO 9001:2015, Cl. 9.3.1).
Why it matters	Top management must demonstrate that the QMS is reviewed at planned intervals and remains aligned with the business. The purpose statement frames every input and output that follows.
Example entry	"To evaluate QMS performance for H1 2026, confirm continued alignment with the company's growth strategy, and decide on improvement actions, resource needs, and changes ahead of recertification."

Purpose statement (to be completed):

--

2. Attendance

Criterion	Record all attendees, their QMS role, and whether top management is present. Note apologies.
Why it matters	Clause 5.1 requires top management engagement; their attendance is auditable evidence of leadership and commitment to the QMS.
Example entry	MD/CEO (Chair), Quality Manager (MR), Heads of Sales, Production, Procurement, HR, IT, Customer Service; Apology: Finance Director.

#	Name	Role / Function	Email	Present / Apology

3. Agenda (Aligned to ISO 9001 Clause 9.3.2 Inputs)

Criterion	List each agenda item against the corresponding 9.3.2 input. Every mandatory input must appear.
Why it matters	Auditors verify that all required inputs (a–f of 9.3.2) were considered. Mapping each agenda item to a clause makes this immediately demonstrable.
Example entry	Item 4 — Status of actions from previous reviews → 9.3.2(a); Item 7 — Customer satisfaction & feedback → 9.3.2(c)(1).

#	Agenda Item	ISO 9001 Cl.	Lead
1	Opening, quorum & adoption of agenda	—	Chair
2	Confirmation of previous minutes	—	Secretary
3	Changes in external/internal issues & interested parties	9.3.2(b)	MR
4	Status of actions from previous management reviews	9.3.2(a)	MR
5	Adequacy of resources	9.3.2(e)	Dept Heads
6	QMS performance & effectiveness (KPIs, trends)	9.3.2(c)	MR / Heads
7	Customer satisfaction & feedback from interested parties	9.3.2(c)(1)	Sales / CS
8	Extent to which quality objectives have been met	9.3.2(c)(2)	Dept Heads
9	Process performance & conformity of products/services	9.3.2(c)(3)	Production / QA
10	Nonconformities and corrective actions	9.3.2(c)(4)	QA
11	Monitoring & measurement results	9.3.2(c)(5)	QA
12	Audit results (internal & external)	9.3.2(c)(6)	Lead Auditor
13	Performance of external providers	9.3.2(c)(7)	Procurement
14	Effectiveness of actions to address risks & opportunities	9.3.2(d)	MR
15	Opportunities for improvement	9.3.2(f)	All
16	Outputs, decisions & actions (Cl. 9.3.3)	9.3.3	Chair
17	AOB & date of next review	—	Chair

4. Status of Actions from Previous Management Reviews

Clause 9.3.2(a)

Criterion	Review every action carried over from the last MRM: owner, due date, status (Open/Closed/Overdue), and effectiveness evidence.
Why it matters	Demonstrates the PDCA loop — without follow-through, the review is ceremonial. Open/overdue items must be re-assigned with new dates.
Example entry	Action: 'Reduce customer complaints on packaging by 30%' → Owner: Production Mgr → Status: Closed → Evidence: Q1 complaints dropped 38% (CSAT report).

#	Action from Previous Review	Owner	Due	Status	Effectiveness Evidence / Remarks

5. Changes in External & Internal Issues & Interested Parties

Clauses 9.3.2(b), 4.1, 4.2

Criterion	Discuss changes since the last review in: (i) external issues (market, regulatory, economic, technological, competitive), (ii) internal issues (structure, capability, culture, capacity), and (iii) needs & expectations of interested parties (customers, employees, regulators, suppliers, owners).
Why it matters	Context drives risk and objectives. Unrecorded shifts (e.g., new customer specs, new regulation, key staff exits) lead to a QMS that no longer fits.
Example entry	External: New customer audit clause requiring traceability to batch level. Internal: Restructuring merged QA into Operations — re-issue of org chart required. Interested party: Major customer requesting ESG questionnaire alongside quality data.

Category (Ext / Int / Interested Party)	Change Identified	Impact on QMS	Action / Owner

6. Adequacy of Resources

Clauses 9.3.2(e), 7.1

Criterion	Assess whether people (competence/headcount), infrastructure, work environment, monitoring & measuring resources (calibration), and organizational knowledge are sufficient to achieve QMS results.
Why it matters	Many QMS failures are resource failures in disguise (under-staffed QA, overdue calibrations, outdated equipment). Top management must explicitly confirm or commit to closing gaps.
Example entry	Gap: 2 of 6 calibrated gauges overdue — Action: outsource calibration in May, budget ₦850k approved. Gap: New ERP module training pending for 12 staff — Action: HR to schedule training in Q3.

Resource Area	Current Status / Gap	Decision / Resource Required	Owner / Due

7. QMS Performance & Effectiveness — KPIs

Clause 9.3.2(c) — Information on QMS Performance

Criterion	Present quantified KPI data (current vs target vs prior period) with trend commentary. Cover product/service conformity, on-time delivery, customer complaints, internal NCRs, supplier performance.
Why it matters	Clause 9.1 requires monitoring & analysis; this section is where leadership consumes that analysis. Trends matter as much as absolute values.
Example entry	On-time delivery: 96.2% vs target 98% (↓ from 97.1% last review) — root cause: vendor delays. First-pass yield: 99.1% vs 98.5%. Complaints/1000 units: 0.42 vs target 0.50 (↑ improvement).

KPI	Target	Current	Previous	Trend	Commentary / Action

8. Customer Satisfaction & Feedback

Clauses 9.3.2(c)(1), 9.1.2

Criterion	Summarize results from satisfaction surveys, NPS/CSAT, complaints, returns, warranty claims, social listening, and direct feedback from key accounts.
Why it matters	Customer perception is the primary measure of QMS effectiveness; persistent dissatisfaction signals process or design weakness, not just service issues.
Example entry	CSAT: 4.3/5 (target 4.2) from 184 responses. NPS: 42 (↑ from 35). Complaints: 27 — top theme: invoice errors (8) → Action: re-train AR team, Owner: Finance, Due: 30 June.

Feedback Source	Period	Result / Score	Key Themes	Action / Owner

9. Achievement of Quality Objectives

Clauses 9.3.2(c)(2), 6.2

Criterion	List each documented quality objective with target, baseline, current performance, status (Achieved / On track / At risk / Not achieved), and corrective decision if off-track.
Why it matters	Objectives are the operational expression of the Quality Policy. Misses must trigger either an action plan or a documented revision of the objective.
Example entry	Objective: 'Reduce internal scrap rate to $\leq 1.5\%$ by Dec' — Current 1.9% — Status: At risk → Action: Six Sigma DMAIC project on Line 3, Owner: Production Mgr, Due: Sep.

Quality Objective	Target	Current	Status	Action if Off-Track / Owner

10. Process Performance & Conformity of Products / Services

Clauses 9.3.2(c)(3), 4.4, 8.1, 8.6

Criterion	For each core QMS process (sales, design, production, service delivery, etc.), report performance against process KPIs and product/service conformity rates at release.
Why it matters	Process owners are accountable for clause 4.4 outcomes; this is where their effectiveness is judged by top management.
Example entry	Production process — Throughput: 92% capacity; Yield: 99.1%; Release reject: 0.3%; Status: Stable. Design process — On-time gate approvals: 80% (target 95%) — Action: revise gate criteria, Owner: Design Lead.

Process	Owner	KPI / Result	Conformity Rate	Action

11. Nonconformities & Corrective Actions

Clauses 9.3.2(c)(4), 10.2

Criterion	Summarize NCRs raised in the period by source (internal audit, customer complaint, process), severity, status, root cause themes, effectiveness verification, and recurrence.
Why it matters	Recurring NCRs indicate weak root-cause analysis. Top management must see whether CAPA is genuinely preventing recurrence — not just closing tickets.
Example entry	Total NCRs: 22 (Major 2, Minor 20). Top theme: documentation errors (9). Average closure: 18 days vs target 30. Recurrence: 1 — re-opened CAPA-2025-014. Action: refresh DCC training.

Source	Opened	Closed	Open	Overdue	Recurrence	Root-Cause Themes & Action

12. Monitoring & Measurement Results

Clauses 9.3.2(c)(5), 9.1.1, 7.1.5

Criterion	Summarize results of monitoring activities not covered above: in-process checks, statistical process control, calibration status of measuring resources, and any measurement system anomalies.
Why it matters	Confirms data used in decisions is reliable. Out-of-calibration equipment or unstable SPC charts undermine every other KPI presented.
Example entry	Calibration: 48/50 instruments current (2 overdue, quarantined). SPC: Line 2 fill weight Cpk = 1.41 (≥ 1.33 target). 1 out-of-control event on 12 May — investigated, root cause: nozzle wear, replaced.

Monitoring Activity	Result	Status	Action / Owner

13. Audit Results — Internal & External

Clauses 9.3.2(c)(6), 9.2

Criterion	Summarize completed internal audits (programme coverage, findings by clause, status), external/certification audit results, and 2nd-party (customer) audits.
Why it matters	Auditors expect to see that the internal audit programme is risk-based, complete, and that findings drive correction — and that external audit findings are tracked to closure.
Example entry	Internal audit programme: 9 of 10 audits completed (90%). Findings: 3 Minor NCRs, 7 OFIs. External (Bureau Veritas Surveillance, Mar 2026): 1 Minor (Cl. 7.5 — outdated work instruction in Maintenance) — closed 12 Apr.

Audit (Internal / External / 2nd Party)	Date	Scope / Clauses	Findings (Maj/Min/OFI)	Status & Action

14. Performance of External Providers

Clauses 9.3.2(c)(7), 8.4

Criterion	Evaluate critical suppliers and outsourced processes against agreed criteria: on-time delivery, quality acceptance rate, complaints, audits/re-evaluations.
Why it matters	Supplier performance directly impacts customer-perceived quality. Top management must decide on re-approval, escalation, or replacement of underperforming providers.
Example entry	Supplier X (raw material): OTD 88% vs 95% target, quality 99.2%. Status: On Watch — Action: 2nd-party audit Q3, Owner: Procurement. Supplier Y: De-listed after 3 consecutive Major NCRs.

Supplier / Outsourced Process	Service Provided	OTD %	Quality %	Status & Decision

15. Effectiveness of Actions on Risks & Opportunities

Clauses 9.3.2(d), 6.1

Criterion	Review each significant risk and opportunity from the QMS risk register: action taken, current risk level vs prior, residual risk acceptable? Opportunities — exploited or deferred?
Why it matters	Closes the loop on Clause 6.1. Without this review, risk registers become static documents disconnected from real decision-making.
Example entry	Risk: 'Single-source supplier of critical component' — Mitigation: 2nd supplier qualified Q1 — Residual: Reduced High→Medium. Opportunity: 'Automate order entry' — Status: Implemented, 30% cycle-time reduction.

Risk / Opportunity	Mitigation / Action Taken	Prior Level	Current Level	Effectiveness / Decision

16. Opportunities for Improvement

Clauses 9.3.2(f), 10.1

Criterion	Capture improvement ideas surfaced during the review: process improvements, innovation, technology adoption, training enhancements, customer-experience upgrades.
Why it matters	Continual improvement is mandatory (Cl. 10.3). This is the source of next-period objectives and projects.
Example entry	OFI: Implement digital NCR workflow to cut closure time by 40%. OFI: Pilot 'voice-of-customer' quarterly forum with top-10 accounts. OFI: Extend FMEA to service processes.

Improvement Opportunity	Expected Benefit	Owner	Target Date

17. Management Review Outputs — Decisions & Actions

Clause 9.3.3

Criterion	Document explicit decisions on: (a) opportunities for improvement, (b) any need for changes to the QMS, and (c) resource needs. Every output must have an action, owner, and due date.
Why it matters	Clause 9.3.3 mandates these outputs as retained documented information. Vague outcomes ('noted', 'to be discussed') fail audit.
Example entry	Decision: Approve ₦4.2M for digital NCR system → Action: Issue PR by 15 June (IT). Change: Revise Quality Policy to add data-driven culture statement → Action: Draft by MR, approve next ExCo.

#	Output Category (Improvement / Change / Resource)	Decision & Action	Owner	Due	Priority

18. Top Management Conclusion

Suitability, Adequacy & Effectiveness — Clause 9.3.1

Criterion	Top management must state, with reasoning, whether the QMS is: SUITABLE (fits the organization, its context and strategy), ADEQUATE (meets all requirements of ISO 9001 and applicable customer/regulatory requirements), and EFFECTIVE (achieves intended results).
Why it matters	This is the formal verdict the certification auditor looks for. It cannot be implied — it must be explicit and reasoned, anchored in the data reviewed.
Example entry	“The QMS remains SUITABLE — scope and processes continue to align with our growth into the export market. ADEQUATE — all Cl. 9.3.2 inputs were reviewed; surveillance audit raised only 1 Minor NCR, now closed. EFFECTIVE — 4 of 5 quality objectives achieved; customer satisfaction trending upward. Resources approved as detailed in Section 17.”
